

# How We Learn That *It Depends*

## In Protective Relaying

Heather Malson

*Power Grid Engineering, LLC*

Munira Masoud

# The Beginning

---

# Equations and Solution Methods

“It depends...”

“Is the pick up  
for a ground  
element about  
75% of the zone  
end ground  
fault?”

# “Do we always block reclosing for bus faults?”

---

“It depends...”

“Well, it depends...”

We both  
started  
working with  
Kevin and  
still heard...

# Protective Relaying Art and Science

## □ Mason and Blackburn

- Personality of the system and engineers
- Technology is common, practices are not

# Why *It Depends* is a Challenge for New Protection Engineers

---

## □ Issues

- Math is precise and accurate
  - Student training and preparation is lacking
  - PE and FE formats
  - Protective relaying depends...
  - Workforce transition
- Teach the *why* with the *how* from the beginning

# Protection Philosophy Challenges

---

## ART vs. SCIENCE

*Rule of thumb and application may vary*

### □ Climates

- Temperature Impacts on Loadability
- Geomagnetic Effects on Ground Relaying
- High Ground Resistances in Mountain and Arid Regions

### □ Biology – Plants & Animals

- Birds, Snakes, and Mice

# Major Tree-related Outages

- July 2, 1996
- August 10, 1996
- August 14, 2003

# Protection Philosophy Challenges

---

- Dependability, Security, and Reliability

# Protection Philosophy Challenges

## Fuse-Saving Schemes (A)

Toward Dependability

Fault Location Lessened

Increased Fast Trip/Close Cycles

Clear Temporary Faults Faster

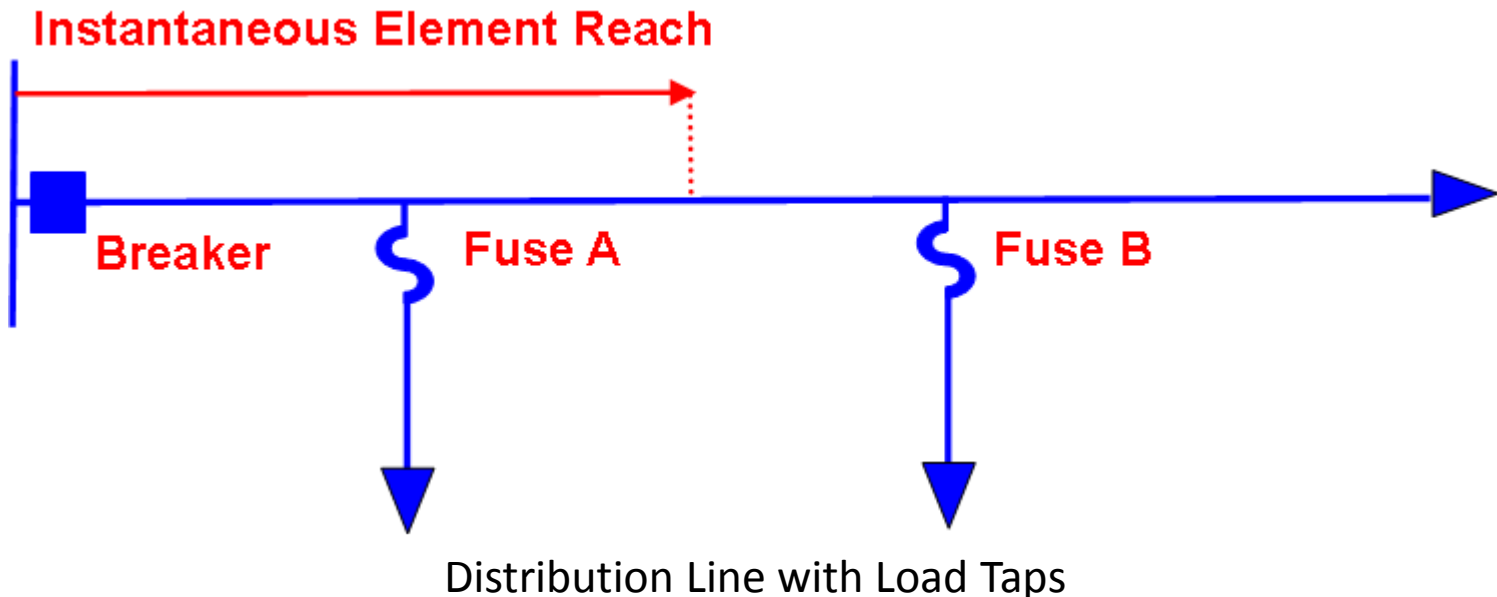

## Non Fuse-Saving Schemes (B)

Toward Security

Fault Location Improved

Increased Tap Outages and Durations

Fewer Feeder Outages

# Protection Philosophy Challenges

- Distance Over-Reaching Zones – Forward or Reverse?
  - Advantages
  - Disadvantages

# Examples Where It Depends

## Distance Relaying Philosophy

# Examples Where It Depends

- ❑ Distance Relaying Challenges
  - System Design & Connected Equipment
- ❑ Multi-terminal lines
- ❑ Tapped distribution transformer
- ❑ Line terminated by transformer
- ❑ Series-compensated line

**1890 NYC – CHAOTIC  
OVERHEAD POWER  
LINES**

**1910 NYC – SAFER  
UNDERGROUND  
POWER LINES**

# Examples Where It Depends

## □ Distance Relaying Challenges

### ■ Mutual coupling in parallel lines

- Fault study with contingency to determine reach
- Reduce Zone 1 reach & increase Zone 2 reach
- Set zero-sequence compensation

**PARALLEL SINGLE-CIRCUIT LINES**

**DOUBLE-CIRCUITS ON A TOWER**

### ■ Time Coordination

- Depends on adjacent protection schemes

# Examples Where It Depends

---

## □ CT Ratio Selection Considerations

- CT size (rating and class)
- CT burden
- Fault currents

CT SATURATION

- Maximum load
- Relay application
- Relay elements sensitivity

# Examples Where It Depends

## CTR Selection for Distribution Line OC Protection

Line Loading	675 A, pri	Relay Rating	5 A, sec
EOL Phase Fault	313 A, pri	Relay Minimum Tap	0.5 A, Sec
EOL Ground Fault	117 A, pri	Maximum CTR	1200/5 A

	Maximum CTR = 240	Reduced CTR = 120
Line Loading →	$675/240 = 2.81 \text{ A, sec}$	<b><math>675/120 = 5.62 \text{ A, sec}</math></b>
Phase Faults →	$313/240 = 1.30 \text{ A, sec}$	$313/120 = 2.61 \text{ A, sec}$
Ground Fault →	<b><math>117/240 = 0.49 \text{ A, sec}</math></b>	$117/120 = 0.98 \text{ A, sec}$

Ground fault below relay  
minimum tap of 0.5A, sec

Phase Pickup  
Below Load

# Examples Where It Depends

## ❑ Breaker Failure Protection Design

- Cost
- Equipment
- Bus Configuration
- System Topology
- Redundancy
- System stability
- Communication
- Local philosophies

# Examples Where It Depends

---

- Breaker Failure Relay Settings
  - Factors to consider

Critical Clearing Time (CCT)  
Trip Timer  
Active Control Timer  
Fault Detectors  
BF Initiate  
Re-trip  
Reset

# Examples Where It Depends

- ❑ Load Encroachment and NERC PRC-023
  - Why do we have PRC-023?

- August 2003 Blackout
- Load Encroachment
- NERC PRC-023 Methodologies

# “It Depends” is a Valid Answer

---

**MENTOR THE ART DAILY**

# “It Depends” is a Valid Answer

---

The noblest pleasure  
is the joy of  
understanding. –

Leonardo Da Vinci

DaVinci helicopter  
and Mona Lisa
